Capital Project Updates

2017 Capital Improvements Project

Another busy construction season has begun at many of the District's school facilities. The Phase 2 portion of the 2017 Capital Improvements project is progressing quite well. The project has an emphasis on air conditioning at the Elementary Schools and renovations to Linneaus W. West. Construction began at Charles F. Johnson, Ann G. McGuinness, and Thomas J. Watson in the Spring. The work performed during the school year had minimal impacts to the schools' day to day activities, but contractors were able to get a lot of HVAC work completed.

New partitions are being constructed at the LWW main office.

Over the summer months, there is a large focus on the work at Linneaus W. West. Renovations for a new main office and secure vestibule, nurse's office, build space, and guidance offices are progressing for completion over the summer. In addition, infrastructure for new plumbing and HVAC systems are going in the corridors to allow work to continue in the Fall in each classroom space.

It is anticipated that construction of Phase 2 will be completed by June 2020.

Windows at LWW are being replaced.

New front concrete walks have been installed at LWW.

Upcoming Capital Project Referendum

Chilled water piping for air conditioning has been installed at Thomas J. Watson.

Demolition of existing HVAC equipment at Charles F. Johnson is complete.

A new condensing unit has been installed on the roof of Charles F. Johnson.

Planning for the next capital project referendum is also in the works. There are many infrastructure improvements that are needed, as well as necessary spatial improvements to help with classroom instruction. At the High School, renovations to the art, science, and Family & Consumer Science rooms will greatly enhance instruction within the spaces.

Other improvements such as renovations of the Charles F. Johnson library and kitchen, High School bleacher replacement, asbestos floor tile replacement, and elementary school cabinetry replacement are also being considered for the next capital project.

The district has planned a vote for this new project to occur on December 3, 2019.

2019 Capital Outlay Project

The 2019 Small Capital Improvements project is focused on the High School. The scope of work for the project includes lighting replacement with LED fixtures in the corridors.

Lighting will continue to be replaced throughout the High School similar to the fixtures that have already been replaced in the building.
